Dear Hiring Manager,

I am a Bachelor of Business Administration graduate in Business Information Technology, with a strong interest in digital services, user-centred design and continuous improvement. I enjoy solving practical problems, understanding user needs and developing solutions that make everyday work easier and more efficient.

During my studies, I participated in various development projects involving user needs analysis, requirements gathering, user interface design, and project coordination. In the DigiErko project, I led a team of five and contributed to the development of a digital service in close collaboration with the client and project team. I also explored the use of artificial intelligence in user-centred design as part of my bachelor's thesis.

I have diverse work experience in healthcare environments at HUS, as well as in customer service and administrative roles. As a Medical Secretary, my responsibilities included appointment scheduling, customer communication, and working with patient information systems. These experiences have strengthened my organisational skills, teamwork abilities, and capacity to adapt to new working methods.

I bring a combination of technical understanding, a user-centred mindset and practical experience from different working environments. I work in a structured and collaborative way, take responsibility for my tasks and adapt quickly to new systems and processes. I am eager to contribute to a team where I can apply my skills, support meaningful development and continue growing professionally.

My portfolio includes examples of my projects and design work. I would be happy for you to take a look:
